CARBON FOOTPRINT 2021

FERROCARRILS DE LA GENERALITAT DE CATALUNYA

At FGC we reaffirm our commitment in the fight against the climate change and since 2018 we calculate our carbon footprint.

117.499,35 tCO₂ eq

0,08Kg CO₂ / journey

2,15 (g CO₂ / visitor The carbon
footprint is the impact
of the activities that we
perform in the environment
and is expressed in tons of
equivalent CO₂.
It is calculated from gas
emissions with greenhouse
effect (GHG) generated.

The GHG Protocol methodology has been used to calculate the carbon footprint

What emissions have we generated?

Scope 1: Direct GHG emissions

5,66 % **6.646,73** tCO₂ eq

↓11,04 % compared to 2018

20,13 % **1337,69** tCO₂eq Fixed sources combustion

62,38 % **4.146,11** tCO₂eq
Mobile sources combustion

0,002 % **0,11** tCO₂eq
Process emissions

Scope 2: Indirect GHG emissions from imported electricity

0%

O tCO2 eq

Emissions from electricity consumption, which comes from 100% renewable sources.

↓100 % compared to 2018

Scope 3: Other indirect GHG emissions

94,34 %

110.852,62 tCO₂ eq

↑17,93 % compared to 2018

90,92 % **100.785,71** tCO2eq

Purchase of goods and services and capital goods

0,23%

254,88 tCO₂eq Waste generated

2,68 %

2.965,68 tCO₂eq Assets leased to third parties

1,88 % **2.083,72** tCO2eq

3,52 %

3.905,95 tCO2eq

0,05 %

52,61 tCO₂eq

0,73 %

804,07 tCO2eq
